

Mapping Accounting Fields to Order Time Fields

Last Modified on 04/10/2019 11:48 am EDT

Overview

Order Time enables you to map its fields to your accounting fields. The ability to map fields will depend on your accounting system. For example, QuickBooks Desktop has item, customer and invoice custom fields that can be mapped while QuickBooks Online only has invoice custom fields that can be mapped.

All you need to do is select an Order Time field from the drop-down and type in the exact name of the custom field in your accounting system.
