

All Orders Mobile - Warehouse Overview

Last Modified on 12/05/2019 9:54 am EST

The Warehouse activity offers multiple functions to help you track and manage your inventory in locations and bins.

Scanning with the Warehouse function is slightly different. Instead of having a scan box for each Bin, Item and Lot or Serial # (if applicable). You designate which you are scanning using radio buttons. This allows you to scan either the Bin first then the Item or the Item first then the Bin. In the following example I first scanned the Bin **B** then Item **1987-H**. The Radio button moves to the Lot/Ser# so you can just scan that if applicable. Note that as you scan you will see the status of what already has been scanned.

(Note: you can also type and press the Enter key or button to effectuate a scan)

The screenshot shows the AllOrdersMobile mobile application interface. At the top, there is a status bar with the text "AllOrdersMobile" and a battery icon. Below the status bar, there are two radio buttons: "Add" (unselected) and "Deduct" (selected). Below these are three radio buttons: "Bin" (unselected), "Item" (unselected), and "Lot/Ser #" (selected). There is a "Scan" input field, a "Qty:" field with the value "1", and an "Auto Scan" checkbox (unchecked). A "Scan" button is located to the right of the "Qty:" field. Below the "Scan" button, a red-bordered box contains the text "Bin B; Item 1987-H; Qty 1".

If you decide to start scanning Item first then All Orders Mobile will automatically set the Bin to either the default Bin of the item or if not found, the location in question. the default Bin of the Location being used. So if you want to specify a Bin that is neither then all ways start with the Bin.

Another difference in the Warehouse activity is that it does not require that you 'Check Out' an existing order so it can be processed. Rather you

start working immediately. The only requirement is that the Item and / or Bin that you are working on already exists in Order Time.

The final difference is that you can process different transaction types at the same time. In other words, you can create multiple adjustments, bin moves and transfers then submit them to the server in a batch.

Warehousing Menu

The Warehousing menu is your starting point. Simply click any of the buttons to navigate to the appropriate screen.

The following describes what each button does.

Button	Description
Find	Allows the user to find the Bin location of an Item, Lot or Serial # as well as can find all the Items contained in a Bin.
Adjust	Allows the user to Add or Deduct inventory from a

	specific location and bin.
Move Bin	Allows the users to move inventory from Bin to Bin.
Transfer Location	Allows the user to transfer inventory from Location to Location
See List	Allows the user to see pending adjustments, bin moves and transfers.
Submit Scans	Allows the user to submit pending adjustments, bin moves and transfers to so that they can be reflected in All Orders.
Change Activity	Navigates the user to the main activity selector.
