Version 1.0.21

Version 1.0.21, Released December 18, 2018 - Known issues fixed and new features added as follows:

Action	Description
Added	Preference to enter bill of material components as percentages.
Added	Preference to capture a signature on a ship doc. The signature can subsequently be printed using the Form Designer.
Added	The ability to use formulas in (i.e. Calculated) custom fields .
Added	Item bar codes. This is used when the same product has different bar codes depending on the # of units contained therein. (e.g. inner and outer boxes)
Added	Quick Build - The ability to create and finish a work order from a sales order's Dependency tab.
Added	Preference in Accounting Integration to include Customer/Job on Bill for linked purchase orders.
Fixed	Various issues with the Label Designer. Please note, you will need to delete then re-add the LABEL elements.
Fixed	Various issues with BigCommerce integration.
Fixed	Sales Rep was not getting transferred from sales order to ship doc.
Fixed	Ship Doc did not expose Shipping Instructions.
Fixed	Ability to use In Transit as the trigger to Sync Bills or Item receipts with your accounting system.

Fixed	Reorder Analysis stuck at 99%.
Fixed	Auto-create ship doc after drop ship purchase order is received.
Fixed	Form Designer - Order of item properties and error when changing the design and saving.
Fixed	Magento duplicate items issue resolved.
