

Shopify: Connection Credentials and Settings

Last Modified on 04/06/2023 1:40 pm EDT

Overview

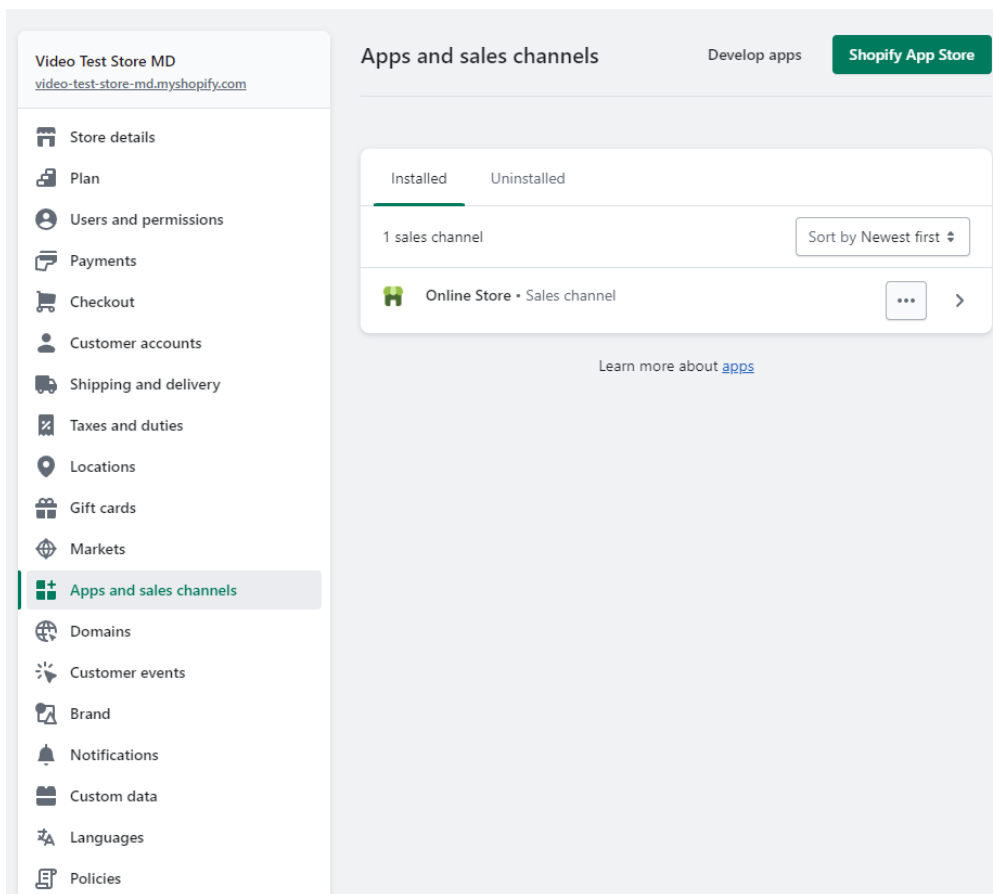

Order Time has several integrator e-commerce partners. The partnership with these platforms makes inventory and order processing system significantly efficient.

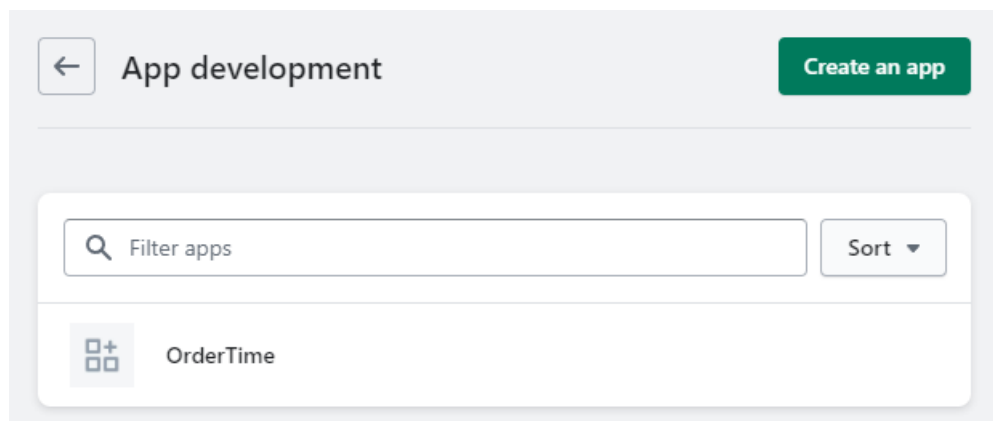

In Order Time, the e-commerce partners are presented as 'Carts'. When you are setting up your E-commerce Integration in Order Time, you have to add the appropriate connection settings for the cart of your choice.

This article will show you the steps for setting up your Cart and generating connection credentials for Shopify.

Create the app

1. From your Shopify admin, click **Settings > Apps and sales channels**.
2. Click **Develop apps**.
3. Click **Create a custom app**.
4. In the modal window, enter the **App name** and select an **App developer**. The app developer can be the store owner, or any staff or collaborator account with the Develop apps permission.
5. Click **Create app**.

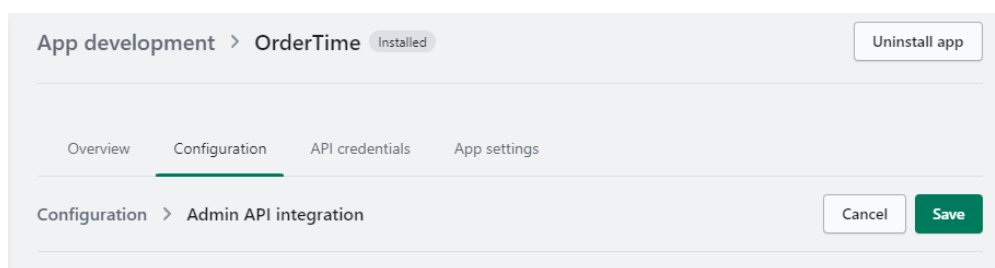

Select API scopes

After you create a custom app, you need to assign API scopes to it. OrderTime uses the Admin API scopes.

1. Click **Select scopes**.
2. In the **Admin API access scopes** section, select the following API scopes:
 1. write_assigned_fulfillment_orders
 2. write_customers

3. read_discounts
4. write_fulfillments
5. read_gdpr_data_request
6. read_gift_cards
7. write_inventory
8. write_locations
9. write_merchant_managed_fulfillment_orders
10. write_orders
11. read_payment_terms
12. write_product_listings
13. write_products
14. read_channels
15. read_shipping
16. write_third_party_fulfillment_orders
17. write_custom_fulfillment_services

After assigning API scopes, be sure to Save the settings.

Install the app and get the API access tokens

After you've set API scopes for your app, you can install the app. You'll get your API access tokens after you install.

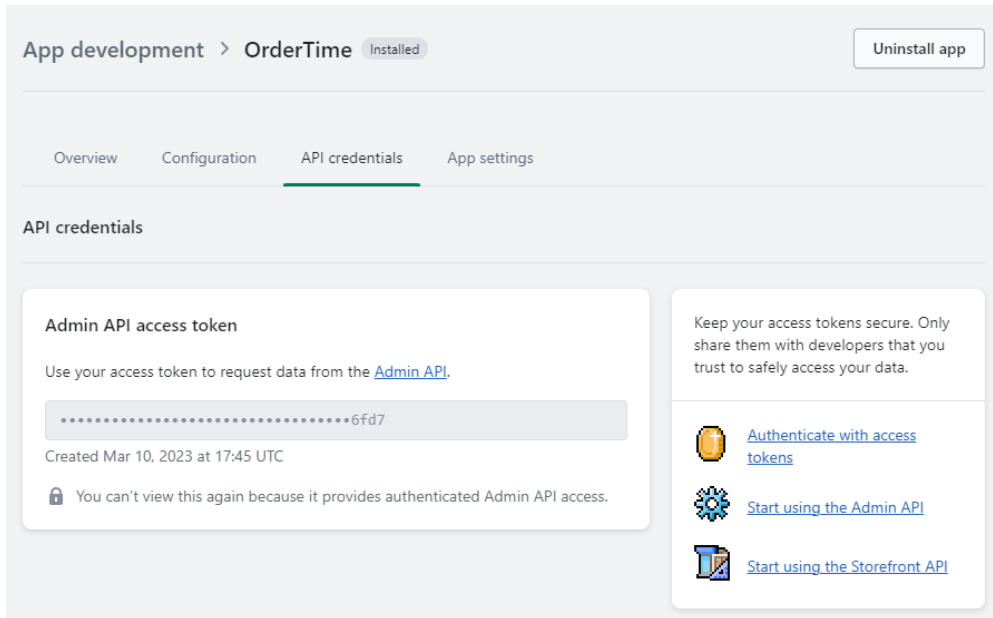

1. Click **Install app**.
2. In the modal window, click **Install app**.
3. Get the access token:

Go to the **Admin API access token** section and click **Reveal token once**.

You can see the Admin API access token on this page only one time, because the token provides API access to sensitive store data. After revealing the access token, **write down or record the**

token somewhere secure so that you can refer to it again. Treat the token like a password. Share the access token only with developers that you trust.

Make sure you save the Admin API access token as this is needed by Order Time Inventory when setting up the integration. If you do not save the Access Token after revealing it, you'll need to uninstall and delete the custom app and start over from the beginning.

Connect Order Time Inventory to your Shopify Custom App

1. Click on the **Gear** icon to access the *Admin* screen of Order Time
2. Click **Ecommerce Integration** under the *General* section.
3. Select **Active** and click the **Add Cart** button.
4. Select **Shopify** by clicking the **Add** button.
5. In the **ECommerce Integration Editor** page, enter and set the connection settings in the **General** tab

You'll need your store URL followed by "/admin" for the API URL. Then put in the Access Token you received above and press the Test Connection button. You can now save the setting.
