

ShipStation Ship Method Mapping

Last Modified on 09/30/2019 4:31 pm EDT

Once you've created your custom store in ShipStation you can edit service mappings.

In our previous article, we showed you the **Status Mapping**, where we were using the default Ship Doc **statuses** . We mentioned making the appropriate changes if you customize your statuses.

Use **Service Mapping** to automatically set the shipping service and package type in ShipStation based on your customer's choice of shipping option during their checkout. This selection imports into ShipStation as the value for *Requested Service*.

As the second of the automated processes in ShipStation, Service Mapping will apply after all product automation but before any automation rules.

[Here is how to set up Service Mapping in ShipStation](#)
