Just split my Excel file for me

Too many rows in the Excel file you are trying to import? Why solve the problem if you can go around it with this simple tool? It's free

1. Drop Excel file or Select file

Header rows

Copy 1 header rows into each file

2. Split into

Rows per file
Files
Enter number
Rows per file

3. Download files

1. Select your File

2. Choose how many header rows to copy to each file that it creates

3. Choose how many rows to split into each file (or how many files and it will split it evenly)

4. Click Download Files and your download will begin with all the split files!
