

Company Preferences - Repair Orders

Last Modified on 06/30/2022 2:01 pm EDT

Repair Order Preferences

- Disable Repair Orders
 - Checking this box will disable the Repair Order function in Order Time
 - Leaving this unchecked will enable the Repair Order function
- Default Repair Bin
 - Here you can select the default bin to use for all Repair Orders

The screenshot displays the OrderTime software interface. At the top, there is a navigation bar with the OrderTime logo, a search bar, and user information (Edwards PCs, Logout). Below the navigation bar, the breadcrumb trail reads 'Admin > Company Preferences'. The main content area is titled 'Company Preferences' and features a sidebar on the left with a list of sections: General, Activities, Doc #s, Items, Inventory, Sales, Shipping, Payments, Purchasing, Receiving, Production, Lot / Serial #s, Repair Orders (highlighted), Mobile, and Mail and Calendar Integration. The 'Repairs' section is active, showing a checkbox for 'Disable Repair Orders' which is currently unchecked. Below this checkbox is a note: 'For customer repair orders, allow adding a lot or serial no if not contained in the list.' Underneath the note is a dropdown menu labeled 'Default Repair Bin:' with 'Default (HQ)' selected. At the top right of the main content area, there are 'Save' and 'Reset' buttons.
