List Shading Rules

Issue:

Users have requested the ability to view lists and add color based on specific rules for their company. The idea is this would make it easier for users to identify which orders to fill first, priority of orders, etc ...

Solution:

Order Time has now added List Shading Rules. This will allow users to specify their own rules and which color to shade that line on that list. To find this feature head to your Admin > List Shading Rules. Then select the section you want. Then issue a name for the rule, select a color and then select the COG wheel to add the filter (rule).

The screenshot shows the 'List Shading Rules' configuration interface. The navigation menu on the left includes 'Sales', 'Purchasing', 'Production', 'Rentals', 'Repairs', 'Warehouse', and 'Reports'. The 'List Shading Rules' section is expanded, showing a list of record types. The 'Sales Order' record type is selected, and a table displays the configuration for the 'Shipping Instructions' rule. The table has columns for Name, Color, Active, and Actions. The 'Shipping Instructions' rule is active and has a color of '#fed8b1'. A 'List Shading Rule Filter' dialog box is open, showing a configuration for the 'Shipping Instructions' rule. The dialog box has a 'Field' dropdown set to 'Shipping Instructions', an 'Operator' dropdown set to 'not null', and a 'Criteria' input field. There are 'Save' and 'Cancel' buttons at the bottom of the dialog box.

Name	Color	Active	Actions
Shipping Instructions	#fed8b1	true	

List Shading Rule Filter

Field	Operator	Criteria
Shipping Instructions	not null
